

Intel® Wireless Display Technical Overview: Enabling Dual Screen Applications

Steve Barile – Dual Screen Evangelist,
Intel Corporation

EXPS001

Agenda

1. What is a Dual Screen App / Demo
2. Dual Screen Environment
3. Duplicate v. Extended Mode Illustrated
4. Application Ideation
5. Data Flow and Enabled App Features
6. Miracast* & WiDi - Compare / Contrast
7. Windows* 8 & Windows 8.1 - Compare / Contrast

Agenda

1. What is a Dual Screen App / Demo
2. Dual Screen Environment
3. Duplicate v. Extended Mode Illustrated
4. Application Ideation
5. Data Flow and Enabled App Features
6. Miracast* & WiDi - Compare / Contrast
7. Windows* 8 & Windows 8.1 - Compare / Contrast

Intel® WiDi (Wireless Display) Dual Screen Apps

One App w/2 windows
on Two monitors

App Window #1
Curate, search &
control on 2' screen

App Window #2
View content on
10' large screen

IDF13

Agenda

1. What is a Dual Screen App / Demo
2. **Dual Screen Environment**
3. Duplicate v. Extended Mode Illustrated
4. Application Ideation
5. Data Flow and Enabled App Features
6. Miracast* & WiDi - Compare / Contrast
7. Windows* 8 & Windows 8.1 - Compare / Contrast

Dual Screen UX - Environment

★ The dual screen apps are a new innovative paradigm!

- Consumers are already “multitasking” using Mobile Devices & TVs

★ Miracast* broad adoption creates a large target

- OS vendors (Android* 4.2.2 and Windows* 8.1)¹ support it
- Many Smart DTV & phone vendors support it

★ Intel® platforms + Intel® WiDi is the best Miracast solution

- Intel WiDi is a superset implementation of Miracast (features + performance)
- The Ultrabook™ with 4th Generation Intel® Core™ processor and GPU is an amazing dual screen platform
- Touch, hardware video codecs, multi-roll radio & 3D Visualization
- Protected content ready via HDCP 2.1

★ Existing OS APIs for ISVs

- Miracast removes all app-to-app multi-OS comms
- One application with two windows; only common OS APIs
- Single PC app with no CE app required

The Numbers

- Intel WiDi 50Mu+ Tx & 15Mu+ certified Rx (as of mid-2013)
- Miracast number can be found on the Wi-Fi Alliance* web site

IDF13

¹Apple* AirPlay* is a proprietary solution

Agenda

1. What is a Dual Screen App / Demo
2. Dual Screen Environment
3. Duplicate v. Extended Mode Illustrated
4. Application Ideation
5. Data Flow and Enabled App Features
6. Miracast* & WiDi - Compare / Contrast
7. Windows* 8 & Windows 8.1 - Compare / Contrast

Intel® WiDi – *Dual Screen Interaction*

Duplicate mode:

Easy to understand
Side-by-side
Monitors

Intel® WiDi – *Dual Screen Interaction*

Extended mode:

Easy to understand
Side-by-side
Monitors

End users understand “Docking”
i.e., Dual Screen side-by-side
extended mode

Intel® WiDi – Dual Screen Interaction

Extended mode:

Push Second Display to TV at 10' Distance, Changes Everything!

Intel® WiDi – Dual Screen Interaction

Use Case: Same screen on both monitors

Duplicate mode:
Same app UI on
both screens
Good for Surfing...

End users understand
Dual Screen duplicate
mode, even at 10'

Agenda

1. What is a Dual Screen App / Demo
2. Dual Screen Environment
3. Duplicate v. Extended Mode Illustrated
4. Application Ideation
5. **Data Flow and Enabled App Features**
6. Miracast* & WiDi - Compare / Contrast
7. Windows* 8 & Windows 8.1 - Compare / Contrast

One Source for all content (A/V/P/MD)

One App on one platform (display, curate & config)

- Dual Screen app dev on a PC is both well understood and hosted in an accessible environment
- ISV enjoy the most CPU / GPU power for creating dynamic and super rich content user experiences

4th Generation Intel[®] Core[™] Processor Enables Dual Screen Apps with a Dynamic UX

Dynamic Experience:

The Ultrabook[™] with 4th Generation Intel[®] Core[™] and GPU is an AMAZING dual screen platform!!

- **Touch** – all Ultrabooks require touch interface for direct manipulation
- **Hardware Video Codecs** – multi video encode/decodes do not saturate CPU
- **3D Visualization** – Intel[®] Graphics support spectacular graphics experience on multiple screens
- **Multiple frame buffers** – Windows* OS supports multiple monitors
- **Multi-roll WiFi radio** – Intel[®] WiFi supports simultaneous connection
 - Access Point (internet) plus Peer-to-Peer device (Intel[®] WiDi)

Possible Dual Screen App Categories

Dual Screen UX ideas for a variety of application categories

Movie/TV Media

- Sharing/Playing
 - Netflix*, Hulu*, etc.
 - YouTube*, TED TV

Personal “Digital Signage”

- Locale info – Time/Date, Weather, Traffic,
- My Info – schedule, commute, ToDo,
- My content – photos, music
- Social media – Facebook*, Flickr* ...

Gaming

- Audience view
- Light wt gaming
 - Maps
 - Backpack contents
- Private vs. Public screen
 - (i.e., Poker / Battleship)

Live Events

- Multi-view camera angle
- Choose your announcer
- Fantasy team
- Stats

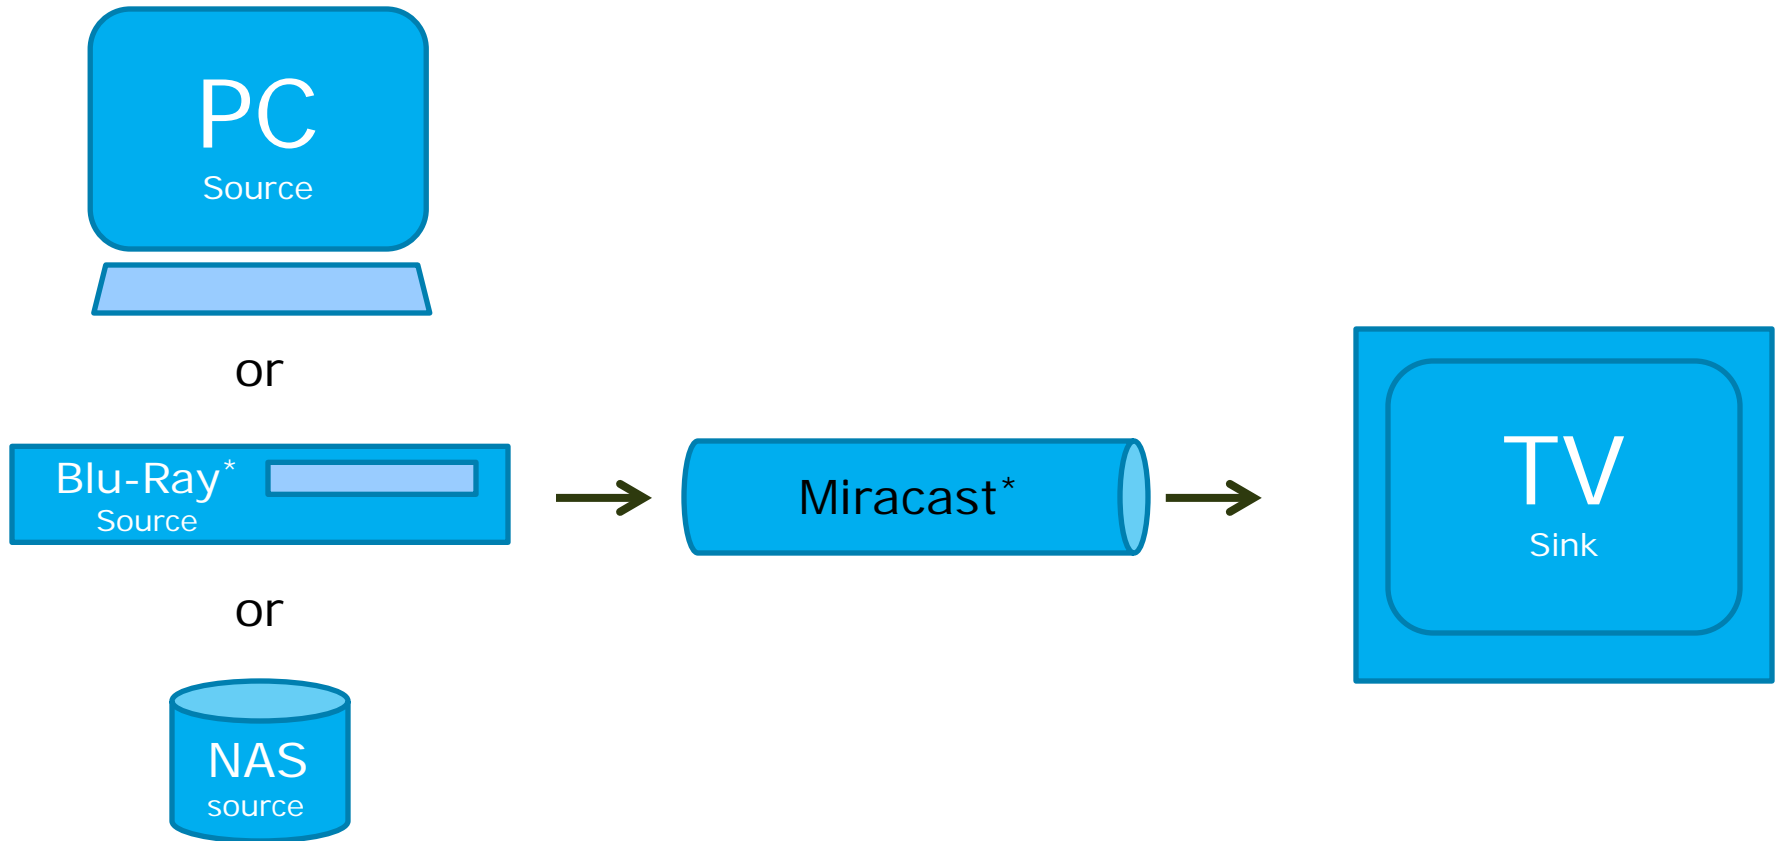

Agenda

1. What is a Dual Screen App / Demo
2. Dual Screen Environment
3. Duplicate v. Extended Mode Illustrated
4. Application Ideation
5. Data Flow and Enabled App Features
- 6. Miracast* & WiDi - Compare / Contrast**
7. Windows* 8 & Windows 8.1 - Compare / Contrast

A Miracast* Specification *Primer*

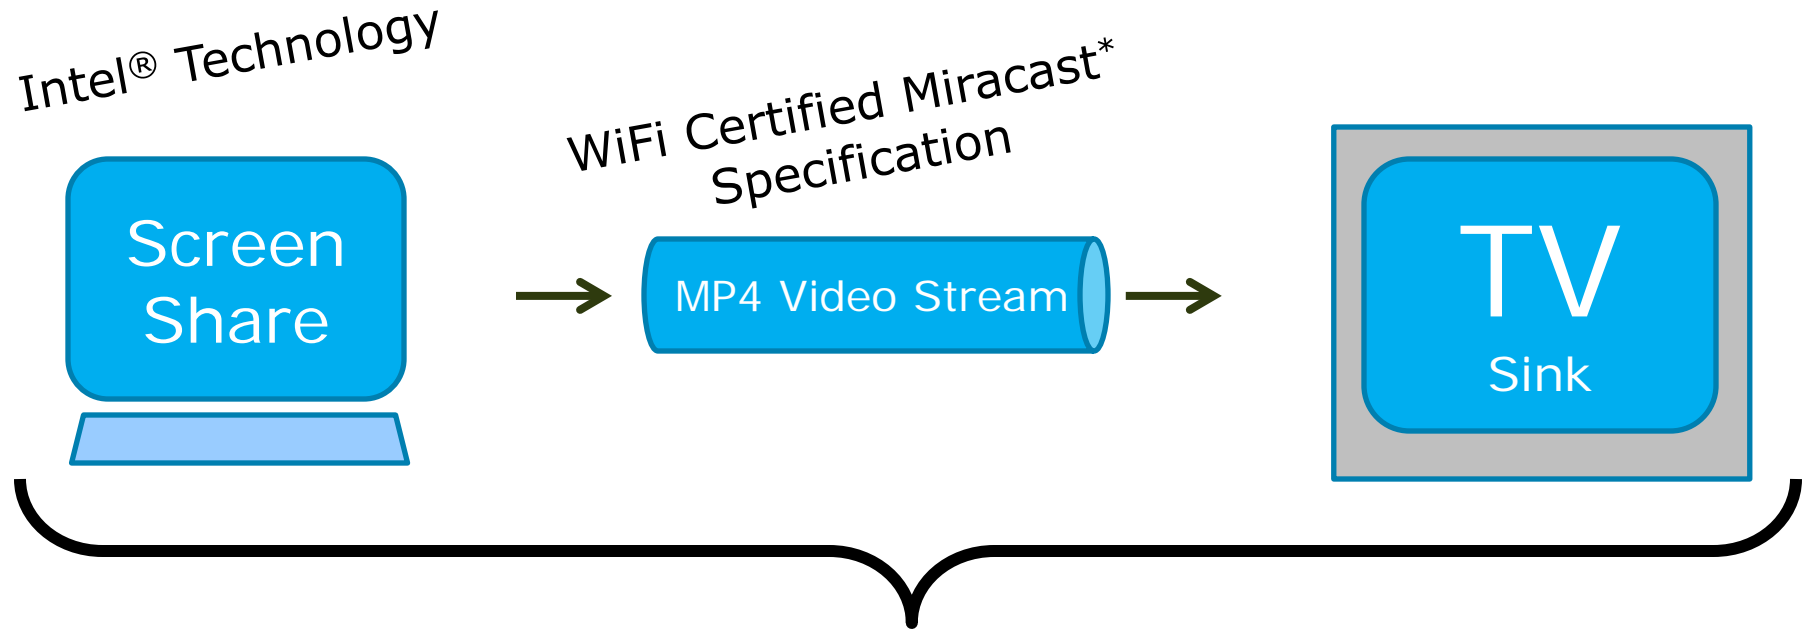

- **Miracast* Requirements:**
 - **Peer-to-Peer WiFi Connection**
 - Use WiFi Direct*
 - **Video Stream Definition**
 - MP4 (always)
 - Frame Rate
 - Frame Dimensions
 - Audio Format
- Miracast:
 - is NOT an application
 - is NOT an end-to-end solutions for screen sharing
 - makes NO assumptions about the video source
 - is only a video pipe between a *source* and a *sink*

Miracast* is Not Just for Computers

Miracast makes no assumptions about Video Source

Intel® WiDi is PC Screen Sharing based on Miracast* Specification

Intel® WiDi End-to-End Screen Sharing solution!!!

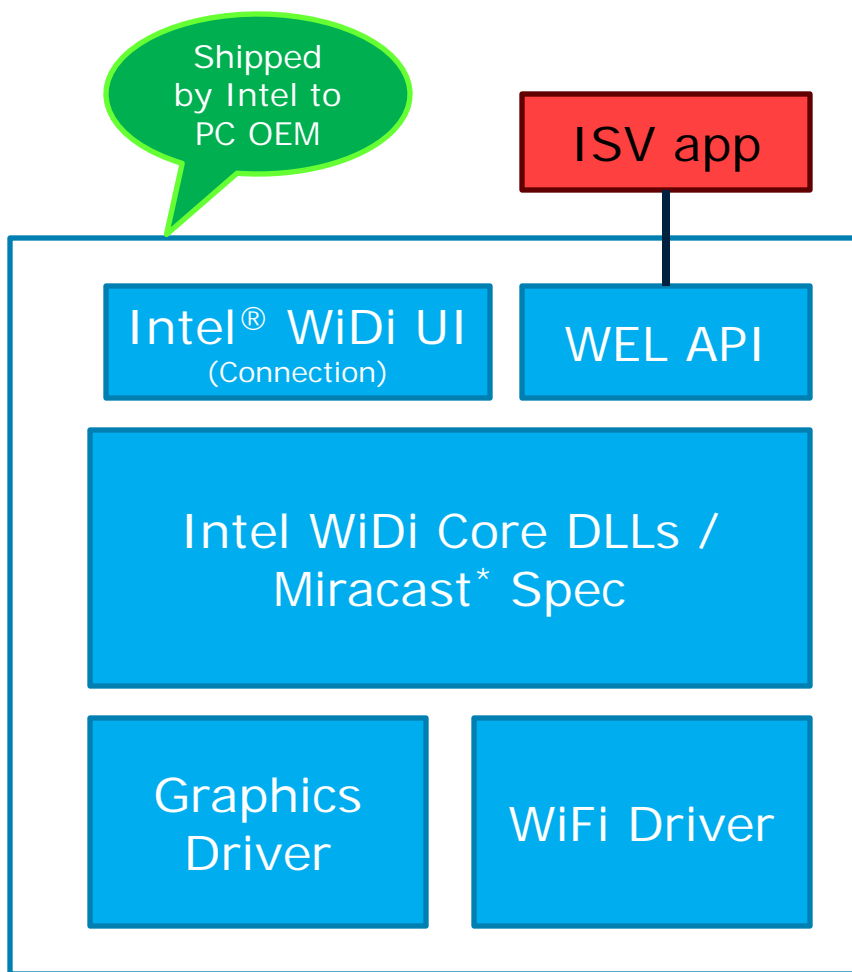

Miracast makes no assumptions about Video Source

Supported Windows* App Environments

	Desktop Apps	Modern UI Apps	Web Apps	Intel® WiDi WEL API <i>optional</i>
Windows* 7/8	Supported in OS Easy to implement No new APIs	Dual Screen Mode Not Supported	Researching Support Browser Plug-in needed Silverlight* support via Intel wrapper DLL	Intel WiDi Ext Lib (WEL) 2.0 API for "connection" action via Intel
Windows 8.1	Supported in OS Easy to implement No new APIs	New Dual Screen APIs (Avail June 26 '13)	Researching Support Browser Plug-in needed Silverlight support via Intel wrapper DLL	Charms menu "Device-Project" Uses: SendKey "⌘+Shift+Ctrl+F21"
Android* 4.2.2	Supported in OS as Presentation Surface Easy to implement App Service APIs	Implemented as Application or Widget to support multitasking		

Summary

- Dual Screen Apps are a new growing user experience
- Supported natively in Windows* (DT and New) & Android*
- Development environment = HDMI* cable†
- One application – One content source – 2 windows
 - Easy to develop, no app-to-app sync needed
- CPU and GPU needed to drive exciting experiences
- Lot's of new user experiences to be discovered
- WiDi is the implementation (based on Miracast* spec)
- Miracast is the industry standard

†To get started, of course test on WiDi connection

Next Steps

- Visit the IDZ (Intel Developer Zone) web site for development materials, source code, videos and links
- Get started coding and see how simple it is
- Develop new and exciting apps with two screens to set your product apart from the rest

Additional Sources of Information

PDF of this presentation is available is available from our Technical Session Catalog: www.intel.com/idfsessionsSF. The URL is on top of Session Agenda Pages in Pocket Guide.

Real Applications available today:

- Nerd HQ - a bunch of interviews from Comic Con '13. These are all shot with 3 cameras and this app enables the user to choose the camera angle. Download here: <http://smooth-las-akam.istreamplanet.com/players/nerdhq/app/>
- Intel WiDi Media Share -The new Intel WiDi Media Share application. https://downloadcenter.intel.com/Detail_Desc.aspx?agr=Y&DwnldID=23022

EXCEPT AS PROVIDED IN INTEL'S TERMS AND CONDITIONS OF SALE FOR SUCH PRODUCTS, INTEL ASSUMES NO LIABILITY WHATSOEVER AND INTEL DISCLAIMS ANY EXPRESS OR IMPLIED WARRANTY, RELATING TO SALE AND/OR USE OF INTEL PRODUCTS INCLUDING LIABILITY OR WARRANTIES RELATING TO FITNESS FOR A PARTICULAR PURPOSE, MERCHANTABILITY, OR INFRINGEMENT OF ANY PATENT, COPYRIGHT OR OTHER INTELLECTUAL PROPERTY RIGHT.

A "Mission Critical Application" is any application in which failure of the Intel Product could result, directly or indirectly, in personal injury or death. SHOULD YOU PURCHASE OR USE INTEL'S PRODUCTS FOR ANY SUCH MISSION CRITICAL APPLICATION, YOU SHALL INDEMNIFY AND HOLD INTEL AND ITS SUBSIDIARIES, SUBCONTRACTORS AND AFFILIATES, AND THE DIRECTORS, OFFICERS, AND EMPLOYEES OF EACH, HARMLESS AGAINST ALL CLAIMS COSTS, DAMAGES, AND EXPENSES AND REASONABLE ATTORNEYS' FEES ARISING OUT OF, DIRECTLY OR INDIRECTLY, ANY CLAIM OF PRODUCT LIABILITY, PERSONAL INJURY, OR DEATH ARISING IN ANY WAY OUT OF SUCH MISSION CRITICAL APPLICATION, WHETHER OR NOT INTEL OR ITS SUBCONTRACTOR WAS NEGLIGENT IN THE DESIGN, MANUFACTURE, OR WARNING OF THE INTEL PRODUCT OR ANY OF ITS PARTS.

Intel may make changes to specifications and product descriptions at any time, without notice. Designers must not rely on the absence or characteristics of any features or instructions marked "reserved" or "undefined". Intel reserves these for future definition and shall have no responsibility whatsoever for conflicts or incompatibilities arising from future changes to them. The information here is subject to change without notice. Do not finalize a design with this information.

The products described in this document may contain design defects or errors known as errata which may cause the product to deviate from published specifications. Current characterized errata are available on request.

Contact your local Intel sales office or your distributor to obtain the latest specifications and before placing your product order. Copies of documents which have an order number and are referenced in this document, or other Intel literature, may be obtained by calling 1-800-548-4725, or go to: <http://www.intel.com/design/literature.htm>

Intel® WiDi Technology requires an Intel® Wireless Display enabled system, compatible adapter and TV. 1080p and Blu-Ray* or other protected content playback only available on select Intel® Core™ processor-based systems with built-in visuals enabled, a compatible adapter and media player, and supporting Intel WiDi software and graphics driver installed. Consult your PC manufacturer. For more information, see www.intel.com/go/widi.

Risk Factors

The above statements and any others in this document that refer to plans and expectations for the third quarter, the year and the future are forward-looking statements that involve a number of risks and uncertainties. Words such as “anticipates,” “expects,” “intends,” “plans,” “believes,” “seeks,” “estimates,” “may,” “will,” “should” and their variations identify forward-looking statements. Statements that refer to or are based on projections, uncertain events or assumptions also identify forward-looking statements. Many factors could affect Intel’s actual results, and variances from Intel’s current expectations regarding such factors could cause actual results to differ materially from those expressed in these forward-looking statements. Intel presently considers the following to be the important factors that could cause actual results to differ materially from the company’s expectations. Demand could be different from Intel’s expectations due to factors including changes in business and economic conditions; customer acceptance of Intel’s and competitors’ products; supply constraints and other disruptions affecting customers; changes in customer order patterns including order cancellations; and changes in the level of inventory at customers. Uncertainty in global economic and financial conditions poses a risk that consumers and businesses may defer purchases in response to negative financial events, which could negatively affect product demand and other related matters. Intel operates in intensely competitive industries that are characterized by a high percentage of costs that are fixed or difficult to reduce in the short term and product demand that is highly variable and difficult to forecast. Revenue and the gross margin percentage are affected by the timing of Intel product introductions and the demand for and market acceptance of Intel’s products; actions taken by Intel’s competitors, including product offerings and introductions, marketing programs and pricing pressures and Intel’s response to such actions; and Intel’s ability to respond quickly to technological developments and to incorporate new features into its products. The gross margin percentage could vary significantly from expectations based on capacity utilization; variations in inventory valuation, including variations related to the timing of qualifying products for sale; changes in revenue levels; segment product mix; the timing and execution of the manufacturing ramp and associated costs; start-up costs; excess or obsolete inventory; changes in unit costs; defects or disruptions in the supply of materials or resources; product manufacturing quality/yields; and impairments of long-lived assets, including manufacturing, assembly/test and intangible assets. Intel’s results could be affected by adverse economic, social, political and physical/infrastructure conditions in countries where Intel, its customers or its suppliers operate, including military conflict and other security risks, natural disasters, infrastructure disruptions, health concerns and fluctuations in currency exchange rates. Expenses, particularly certain marketing and compensation expenses, as well as restructuring and asset impairment charges, vary depending on the level of demand for Intel’s products and the level of revenue and profits. Intel’s results could be affected by the timing of closing of acquisitions and divestitures. Intel’s results could be affected by adverse effects associated with product defects and errata (deviations from published specifications), and by litigation or regulatory matters involving intellectual property, stockholder, consumer, antitrust, disclosure and other issues, such as the litigation and regulatory matters described in Intel’s SEC reports. An unfavorable ruling could include monetary damages or an injunction prohibiting Intel from manufacturing or selling one or more products, precluding particular business practices, impacting Intel’s ability to design its products, or requiring other remedies such as compulsory licensing of intellectual property. A detailed discussion of these and other factors that could affect Intel’s results is included in Intel’s SEC filings, including the company’s most recent reports on Form 10-Q, Form 10-K and earnings release.

Rev. 7/17/13

IDF13

Back Up

Intel® Wireless Display is Based on the Miracast* Spec¹

Intel® Wireless Display (Intel® WiDi) Released ver. 1.0 in 2009

- Based on Intel “MyWiFi” peer-to-peer WiFi driver and hardware (multi-roll)
- Based on Intel proprietary RTSP protocol & UDP/IP data plane

In 2010 WiFi Alliance’s “WiFi Direct*” spec (peer-to-peer only) was gaining acceptance

- Industry standard peer-to-peer networking protocol w/WPA2 security
- Marvell*, Atheros*, Broadcom*, Intel, Ralink* and Realtek* announced their first products in late 2010
- Android* 4 in 2011

In 2011 WiFi Alliance* started working on “Wireless Display” standard

- Intel submitted Intel WiDi spec for review
- Intel and many other CE and PC vendors participated in review process

In 2012 WiFi Alliance released Miracast* Spec 1.0 (*including WiFi Direct*)

- Similar to Intel’s RTSP protocol & UDP/IP data plane
- Intel ported Intel WiDi 4.0 to Miracast Spec 1.0
- Intel added vendor extensions and performance criteria¹ to match WiDi ver. 2/3 feature set
- Intel WiDi software is 1 of 5 Miracast Certification “test bed” source applications

¹Intel WiDi is a *superset* implementation of the Miracast Specification (see backup for details)

Intel® WiDi “Superset Features”

Quality Metrics

- MOS 4 level video quality required
- Low Delay Mode - < 100ms latency screen-to-screen
- Optimized connection time

Additional Features

- Fast Cursor – out of band cursor coordinates to drive RX hardware cursor
- USB over IP – Full HID, Video Camera, and Mass Storage device classes
- Cinematic Sync – WiDi video stream frame rate reconfigures to match the media frame rate
- “PSR” (panel self refresh) – skip non-changing frames to increase battery life and reduce WiFi bandwidth
- IT Modes – The WiDi Rx is a network managed device and enforces supports IT settings i.e., bandwidth limiting, etc.

DLNA v. Miracast* (Intel® WiDi - Screen Sharing)

DLNA:

- Based on serving/streaming media files over a Server/Client/Controller (3 box) method over layer 3 network
- Most implementations have been based on “Pull” method
 - Difficult UX for end users
- Requires the player to locally render the content which requires codecs for all media types
 - Not future proof
 - MPEG II req'ed with \$2 lic/unit

Miracast (screen sharing):

- Based on video streaming between Source and Sink over layer 2 network
 - Not file based
- Most implementations based on “Push” method
 - Consol UX easy for users (touch, mouse/KB)
- Requires the Sink to render only MP4
